Pregnancy-associated breast cancer: therapeutic decision-making and health care outcomes

Pregnancy-associated breast cancer (PABC) is the most common cancer diagnosed during pregnancy. Some prospective studies have hypothesized poorer outcomes in PABC yet outcomes are not explored in detail with regards to the receipt of substandard and/or delayed treatment.

Dana M. Chase, MD

*Senior Fellow, Division of Gynecologic Oncology,
UC Irvine Medical Center*

Dr. Chase is currently with the OB/GYN Training Program at UC Irvine Medical Center, serving as Senior Fellow, Division of Gynecologic Oncology.
